

Handling and Safety

Note: Failure to follow these safety precautions may result in injury, equipment damage, system failure, or death. Always consult the manufacturer's documentation for additional details or specific requirements.

Product Description: The Borelli splined couplings are a high-quality mechanical component designed for reliable power transmission. It is constructed from heat-treated steel UNI 16 CrNi4/P6, ensuring durability and resistance to mechanical stress.

Handling Instructions

1. Handling and Storage

- Store in a clean, dry environment to prevent corrosion.
- Use proper lifting techniques or equipment for handling to avoid injury or damage.

2. Installation

- Ensure compatibility with the mating components and follow the manufacturer's instructions for installation.
- Use appropriate tools to prevent damage to the coupling or injury to the installer.

3. Operational Safety

- Regularly inspect the coupling for wear, deformation, or signs of failure.

4. Maintenance

- Schedule routine maintenance to ensure optimal performance and longevity.
- Replace worn or damaged components immediately to prevent system failure.

5. Disposal

- Dispose of the coupling in accordance with local regulations for metallic components.
